

Railway Capabilities

When plant or materials need to be unloaded next to rail lines, while other transport companies require direct access to the tracks, often travelling miles out of the way to enter via an access point, Gatwick Group's remote controlled fly-jib equipped HIAB's simply reach across often up to four tracks at a time, lifting weights of up to 18 tonnes and with spans ranging as far as 23 meters allowing the load to be placed precisely where it is needed. Which means Gatwick Group's rail customers consistently enjoy not only increased Health and Safety benefits to all staff but significant time saving on each delivery, which is critical when working within the constraints of a timed possession. We are Link up Proof Audited with PTS trained Staff.
